

# Lecture

## “Advanced Methods in Automatic Speech Recognition”

### SS 2016

Type	Schedule / Room (für Master Informatik, Master SSE und Master MI)	Start	Instructor
V3	Do 10 <sup>15</sup> - 11 <sup>45</sup> (6124, SR i6)* Fr 10 <sup>15</sup> - 11 <sup>45</sup> (6124, SR i6), 14 tgl.* *Einzeltermine im CAMPUS beachten!	13.04.16	Dr.rer.nat. R. Schlüter Prof. Dr.-Ing. H. Ney Tamer Alkhoul
Ü2	Mi 08 <sup>30</sup> - 10 <sup>00</sup> (6124, SR i6)		t.b.a.

#### Content:

- Recapitulation speech recognition with large vocabulary and linear lexicon
- Search with lexical prefix trees
- Word graphs and word pair approximation
- Time-conditioned search
- Coarticulation and word segments
- Confidence measures and system combination
- Discriminative training
- Speaker adaption and normalization
- Current topics

The lecture covers advanced aspects of automatic speech recognition. Special emphasis is put to decoding/search beyond linear lexica, modelling of words and word boundaries, and discriminative training of speech recognition systems.

#### Assignment:

Applied Computer Science or Field of Specialization

#### Requirements:

Modul (Introduction to) Automatic Speech Recognition or comparable knowledge in the field of automatic speech recognition.

#### References:

- F. Jelinek: “Statistical Methods for Speech Recognition”, MIT Press, Cambridge, MA, 1998.
